Interface Management

A complete Solution instead of Interface Chaos

With the success of a company or through the integration of new business areas, the number and variety of EDI interfaces or EDI specifications often grows. Often, several software products, complicated filing systems and specialised knowledge have been distributed decentrally in the company over time or employees have left the company. The effort and thus the costs of interface management rise rapidly.

GEFEG.FX creates Order and Tidies Up!

GEFEG.FX combines all interfaces and typical requirements such as maintenance, development, documentation and validation in a uniform and consistent environment. Expertise, workflows and data governance are concentrated in one place. This unites the users and thus releases considerable cost saving potentials.

Innovative and integrative Software Solution

GEFEG.FX is independent of the EDI system architecture (EDI syntax, ERP system, converter, middleware) and therefore becomes the central interface hub. Innovative concepts, such as the Guideline technology, enable business users to feed the interface descriptions (specifications) from a content, business and legal perspective and publish business-friendly results. Supported by collaborative communication and easily accessible central data management (SVN, GIT), but also technical users can access the interface descriptions to provide their input and generate relevant technical output.
